▪ Deployment & Hosting:	cPanel [Creating databases, deploying Laravel applications, basic configuration]

Work experience

STAR TECH	
May 15, 2024	**present**
Back End [PHP – Laravel]	
WithU project	A user-friendly real estate platform designed for tourists, allowing users to browse and book properties through detailed listings, an interactive map, and advanced filters for location, dates, guest count, price range, and amenities. It also includes a fully integrated property management system for owners, enabling them to manage their properties, bookings, and financial operations in one place—making it a complete solution for both tourists and property owners.
Diaarna project	Diaarna is a comprehensive real estate management platform that allows users to browse properties, make reservations, and pay rent seamlessly through an integrated wallet system or secure payment gateways. The platform also provides property owners with a full management suite, enabling them to oversee their units, handle bookings, track payments, and manage financial operations—all in one unified system. This makes Diaarna a complete, efficient solution for both tenants and property owners.
Mender project web-page user user-pro	Maintenance Services Platform – Connects service providers with customers. Features include service requests (predefined or custom), location-based provider matching, real-time chat, push notifications, multi-language support, and multiple payment methods.
