SUMMARY

Software Engineer with over 3 years of experience in backend development using PHP (Laravel). Experienced in designing scalable backend systems, building RESTful APIs, and contributing to system architecture and database design. Proficient in translating business requirements into technical solutions and delivering maintainable, high-quality applications across multiple production projects.

SKILLS

- **Languages:** PHP, JavaScript, HTML, CSS
- **Frameworks:** Laravel
- **APIs:** RESTful APIs, System Integration
- **Databases:** MySQL (Design, Optimization, Indexing)
- **Architecture:** MVC, Repository Pattern, Clean Architecture
- **Real-Time:** Pusher, Firebase
- **Integrations:** PayTabs, Telr, SMS Gateway (Dreams), Nafath, NHC
- **Tools:** Git, Jira, ClickUp
- **Methodologies:** Agile (Scrum), Plan-Driven SDLC
- **Deployment:** cPanel, Laravel Hosting, Server Configuration

WORK EXPERIENCE

Back-End Software Engineer (PHP – Laravel)

Starstech/ Contract:

May 2024 – Present

- Designed and developed scalable backend systems using Laravel.
- Translated business requirements into technical architecture and database designs.
- Built and maintained RESTful APIs for web and mobile applications.
- Designed optimized MySQL schemas ensuring performance and scalability.
- Integrated third-party services including payment gateways, SMS systems, and external APIs.
- Contributed to system architecture decisions and backend module structuring.

Academic:

2022 - 2025

- Developed multiple backend systems using Laravel as part of academic and team-based projects.
- Designed relational databases and implemented RESTful APIs.
- Applied OOP principles, MVC architecture, and Repository pattern.
- Participated in requirement analysis and system design phases.
- Delivered complete backend solutions in collaboration with team members.

PROJECTS

- **Ataya Platform:** ([website](#), [ios-app](#), [android-app](#))
Ataya Platform is a comprehensive platform for managing auctions and offers related to horses and camels. It provides a range of services including a notification system, multiple payment methods, and multi-language support. I contributed to analyzing project requirements, designing and building the database, developing the financial system and notification system, and actively participated in all stages of backend development of the platform.
- **Mender Platform:** ([user-app](#), [user-pro-app](#))
Maintenance Services Platform – Connects service providers with customers. Features include service requests (predefined or custom), location-based provider matching, real-time chat, push notifications, multi-language support, and multiple payment methods.
- **Aqartik Platform:** ([user-app](#), [website](#))
Aqartik is a user-friendly application that allows users to browse and publish licensed properties—verified through the General Real Estate Authority in Saudi Arabia. The platform provides detailed listings, map browsing, and the ability to submit specific property requests, making it a simple and complete solution for both seekers and owners.
- **Maktab Platform:** ([user-app](#), [user-pro-app](#), [website](#))
Maktab is a real estate platform focused on licensed office spaces verified by the Saudi General Real Estate Authority. It enables property owners (lessors) to list and manage verified office properties, while allowing tenants to browse available offices, view detailed listings on maps, and submit rental requests. The platform provides a streamlined and efficient solution for connecting office space providers with potential tenants through a transparent and user-friendly experience.
- **Diaarna Platform:** ([website](#))
Diaarna is a comprehensive real estate management platform that allows users to browse properties, make reservations, and pay rent seamlessly through an integrated wallet system or secure payment gateways. The platform also provides property owners with a full management suite, enabling them to oversee their units, handle bookings, track payments, and manage financial operations—all in one unified system. This makes Diaarna a complete, efficient solution for both tenants and property owners.
- **WithU Platform:** ([website](#))
A user-friendly real estate platform designed for tourists, allowing users to browse and book properties through detailed listings, an interactive map, and advanced filters for location, dates, guest count, price range, and amenities. It also includes a fully integrated property management system for owners, enabling them to manage their properties, bookings, and financial operations in one place—making it a complete solution for both tourists and property owners.

Academic Projects

- **Repairo Application:**
Repairo is a mobile-based application that connects users with a network of technicians offering repair and maintenance services. The platform includes a comprehensive booking management system, real-time chat between users and technicians, and a notification system to enhance communication and service efficiency. My responsibilities included developing the backend using Laravel, participating in

requirement analysis, and designing and implementing the system architecture to ensure scalability, performance, and maintainability.

- **Veloute System:**

Management System for a Chocolate Manufacturing Company – Developed a comprehensive system covering operations administration, warehouse and store management, customer ordering, and user profile management. Features include inventory tracking, role-based employee management, order processing with branch selection, multiple payment methods, and efficient coordination between warehouses and stores to streamline operations.

- **Human Resource Management system:**

Worked on developing a Human Resource Management (HRM) system covering payroll, attendance, and role-based permissions. My contribution included participating in requirements analysis, building the backend services, and designing the database structure to support system functionality and scalability.

EDUCATION

Bachelor's Degree in Information Technology – Software Engineering
Faculty of Informatics Engineering, University of Damascus — Damascus, Syria

Graduated: 2025

LANGUAGES

- Arabic (native)
- English (intermediate)
